XXXX Launches New XXXX XXXX System for the Animation Industry Thursday, March 8, 20XX

"XXXX, XX, March 8, 20XX--(T-Net)-- XXXX Technologies recently announced the launch of its next generation XXXX XXXX Active Optical Real-Time motion capture system that will help animators dramatically eliminate post processing costs while saving thousands of dollars with their XXXX development projects.

XXXX II is equipped with a robust and lightweight mechanical design (X kg) for easier portability allowing animators to relocate the equipment at different studios as well as giving them the flexibility to mount the system on a wall, ceiling, or tripod within an animation studio. The system also offers ultra-high capture rates of up to XXXX frames per second obtained through completely wireless XXX markers. Also, with the innovative XXXX software, animators will no longer have to manually calibrate the calibration area for a XXXX session. The 'XXXX XXXX' feature continuously monitors Tracker movement and automatically recalibrates the capture area again (in under X seconds), if such movement is sensed. XXXX is the only XXXX provider in the world offering such powerful, automatic, adaptive calibration capability and this unique feature is what makes the new XXXX II system an increasingly attractive option for animation studios around the world.

For animators using XXXX, XXX now has a plug-in available that enables real-time online streaming of XXXX data directly into XXXX. This allows Directors to view animated motions being performed by actors wearing XXXX suits 'LIVE' before sending the actors back after a XXXX session.

XXX also has a 'documented process' to transport animated characters designed and built in XXXX to be moved back into XXXX. These characters are then super-imposed with real-time live motions captured on the XXXX systems on to these characters and the integrated XXXX data is moved back into XXX for further texturing, rendering, etc. The XXXX system provides data output in the industry standard XXX format, thereby providing a gateway into most application software packages used in the animation industry such as XX Studio XXX, XXXX, etc. "

Credit Ratings - International

Following are the main criteria taken into consideration when assessing the creditworthiness of a company:

1	Legal form
2	Age of the Company
3	Number of employees
4	Availability of accounts / financial strength of the company (Net Worth plus Working Capital)
5	The Working Capital
6	Productivity (turnover/employee)
7	Number of Branches
8	Number of Subsidiaries / Associated Companies
9	Shareholders Structure
10	Structure of Shareholders Funds
11	Payment Manner of the Company
12	Payment Manner of the Company's customers
13	Registered defaults (subpoenas, debts towards the Inland Revenue and/or Social Security)
14	Debt collections
15	Performance of the sector
16	Personal impressions of the company's management and
	the manner in which business has been conducted so far
	(are or have members of the management been involved
	in other companies that went bankrupt?)

Priority/Importance:

17

The company's financial situation
The company's payment manner
The company structure
The situation of the sector as a whole
Personal impressions

International Solvency Ratings:

The international solvency rating ranges from 1 to 5.

Press releases (where available)

1 is the worst rating

5 is the best rating

There are also ratings of 8 and 9.

8 is a neutral rating and is given to new companies or the information available is insufficient or data source do not agree and fall outside the normal range.

9 means the company has ceased trading, is in liquidation or the presence of other negative indicators.

No Rating means that the local investigator is unable to allocate a determinate rating to the company. See fuller explantion of the individual ratings below.

The wording on the online database reports may be slightly different from that in freshly investigated (offline) reports.

Ratings	Description in Offline Reports	Description in Database (Online) Reports	Comments:
1	High Risk	High Risk	credit dealings are not advised
2	Medium/High Risk		A credit limit may be given, but normally Graydon advises exporters to seek secured terms
3	Medium Risk	Normal Risk	Suitable for credit dealings
4	Moderate Risk	Low/Normal Risk	Credit dealings are recommended
5	Low Risk	Low Risk	Good for credit dealings

International Solvency Ratings Explanation:

5 Low Risk

Depending on the company's size, support from a strong parent, financial performance and other supporting evidence a company may be assessed as being suitable for any credit.

4 Moderate or Low/Normal Risk

The company should be regarded as suitable for open credit. Guidance should be taken from the recommendation in the report.

3 Medium or Normal Risk

The company represents an average risk for open credit dealings.

2 Medium High or Above Normal Risk

A rating of 2 is given if payments need to be monitored and the working capital is very low or negative.

The company may still be suitable for credit dealings at present, but may become a higher than average risk if the current negative trend persists. Exporters may be advised to seek secured terms.

1 High Risk

A rating of 1 is given if a company is technically insolvent, ie, negative shareholders funds, or heavily in the red or has been served with a court order or subpoena or has defaulted on its obligations to the Social Security or Inland Revenue.

8 Unclassified Risk

Normally, an 8 unclassified is given to companies that are either in their infancy or where too little information is available (either from official and semi-official sources and where an interview could not be conducted).

8 unclassified applies also to companies that could not be traced in the country of enquiry, or to offshore companies.

However, 8 unclassified may also be given where the different sources from which a rating would normally be derived do not agree. For example, the company may be good to average payers but there may already be some trend visible that points towards financial stress, eg, the sector as a whole not doing well even though the subject company may not yet be affected or the company is located in a geographical area where an increasing number of companies are failing.

- 9 A rating of 9 is given if the company is:
 - in liquidation
 - * bankruptcy proceedings are under way
 - * ceased trading / is dormant
 - * has debt collections or court judgments against its name or against one or more of its directors/principals
 - * any other negative factors. Guidance should be taken from information in the report. In light of above, no credit limit is given.
 - * A rating of 9 may appear also if the address of enquiry is that of a branch which is no longer active or whose operational status could not be ascertained. In such cases, the credit limit recommended refers to the headoffice.

No Rating The company is either brand new or no experience of the company's performance, payments and otherwise. The further development of the company or business remains to be seen.
