The breakdown of the Ellipro score into 10 segments

The number of segments, their definitions and the expected default rates resulting from them are specific to each scoring system.

Segments are defined by regrouping entities having similar default probabilities.

They are numbered from 1 to 10 and based on the following table:

Risk classes	Proven risk	Very high risk				Low to near zero risk					
Segments	0	Score 1	Score 2	Score 3	Score 4	Score 5	Score 6	Score 7	Score 8	Score 9	Score 10
Expected average default rates over 1 year		25 %	10 %	4 %	2 %	1,3 %	0,7 %	0,4 %	0,15 %	0,05 %	0 %

The proven risk of default measured by xxxxxxxx corresponds to the legal default: receivership or liquidation.

It is important to notice that this scale is highly discriminating, since the expected average default rate for a given score is about half the one of the preceding score.

For example, the average default rate for entities scored 3 is 4 %, when the one for score 2 is 10 %.
