#### Other Investigations

On 17th Feb 2021, we have contacted one of the staff from the Subject and she has confirmed certain information in the report.

We have also verified the contact number and address provided by our client.

#### FINANCIAL ANALYSIS

##### Profitability

Turnover	: Decreased	[	8.57%	]
Profit/(Loss) Before Tax	: Increased	[	17.17%	]
Return on Shareholder Funds	: Acceptable	[	20.19%	]
Return on Net Assets	: Acceptable	[	22.79%	]

The lower turnover could be due to the unfavourable market conditions. The Subject's management have been efficient in controlling its operating costs. The Subject's management had generated acceptable return for its shareholders using its assets.

##### Working Capital Control

Stock Ratio	: Unfavourable	[	188 Days	]
Debtor Ratio	: Favourable	[	42 Days	]
Creditors Ratio	: Favourable	[	5 Days	]

The Subject could be incurring higher holding cost. As its capital was tied up in stocks, it could face liquidity problems. The favourable debtors' days could be due to the good credit control measures implemented by the Subject. The Subject had a favourable creditors' ratio where the Subject could be taking advantage of the cash discounts and also wanting to maintain goodwill with its creditors.

##### Liquidity

Liquid Ratio	: Unfavourable	[	0.79 Times	]
Current Ratio	: Favourable	[	2.97 Times	]

A low liquid ratio means that the Subject may be facing working capital deficiency. If the Subject cannot obtain additional financing or injection of fresh capital, it may face difficulties in meeting its short term obligations.

##### Solvency

Interest Cover	: Acceptable	[	8.89 Times	]
Gearing Ratio	: Favourable	[	0.07 Times	]

The Subject's interest cover was slightly low. If there is no sharp fall in its profit or sudden increase in the interest rates, we believe the Subject is able to generate sufficient income to service its interest and repay the loans. The Subject was lowly geared thus it had a low financial risk. The Subject was mainly financed by its shareholders' funds and internally generated funds. In times of economic slowdown / downturn, the Subject being a lowly geared company, will be able to compete better than those companies which are highly geared in the same industry.

##### Overall Assessment :

Due to the efficient control of its operating costs, the Subject was able to remain profitable despite lower turnover achieved during the year. Due to its weak liquidity position, the Subject will be faced with problems in meeting all its short term obligations if no short term loan is obtained or additional capital injected into the Subject. The Subject had an acceptable interest cover. If there is no sudden sharp increase in interest rate or fall in the Subject's profit, we do believe the Subject is able to generate sufficient cash flow to service its interest payment. The Subject as a lowly geared company, will be more secured compared to those highly geared companies. It has the ability to meet all its long term obligations.

**Overall financial condition of the Subject : FAIR**

## INDUSTRY ANALYSIS

### MSIC CODE

**INDUSTRY : MOTOR VEHICLE**

The auto sector is expected underweight, citing tough market conditions, the weaker ringgit, and higher prices as barriers to consumer spending on cars in 2020. A prolonged Movement Control Order (MCO) due to COVID-19 will further dampen auto earnings as well.

The March-April 2020 sales volume is expected to be badly hit due to the temporary suspension of operations which was extended to April 14, 2020, in line with the view from the Malaysian Automotive Association (MAA). The total industry volume (TIV) for 2020 is forecast to plunge 20% year-on-year (yoy) to about 485,000 units.

The lower TIV is mainly due to the developing Covid-19 crisis, weaker consumer sentiment, and resultant recent downward revision to gross domestic product (GDP) forecasts. Malaysians may tighten their belts to settle with a national-brand car under tough market conditions. The TIV had shown signs of exhaustion since the start of the year 2020.

The MCO has shut down operations for auto players in Malaysia, and its extension to April 14 has not been kind to the sector.

According to the main player, which serves most of the auto players in Malaysia in terms of spare parts, warning in its 2019 fourth-quarter results that many of the parts and components are sourced from China, and the disruption in the supply chain remains a major concern. However, most companies maintain a buffer in their inventory of about four to six months for tackling emergencies.

Part shortages could impact not only the assembly plants but also local parts stores and repair shops. With many Malaysians remaining quarantined at home and supply lines affected, the production plants could struggle to reopen or regain full capacity in the medium term. Auto margins are also set to see erosion in 2020, due to the weakened ringgit, aggressive discounting factor, and higher CBU prices from the new excise duty regulation in January 2020.

The Ringgit to USD year-end is targeted to RM4.30/US\$ from a previous RM4.20/US\$. The depreciation of the ringgit will negatively impact the auto sector, especially for non-national brands, owing to higher imported raw material costs, which may be difficult to pass on to customers in a weak demand environment.

With the MCO halting operations and the higher prices, the sector's core net profit for 2020 is expected to fall 11%. National marques are expected to perform better than non-national brands, with Perodua's top position and Proton's resurgence resulting in national marques sharing a total of 66.6%, an all-time high.

With the absence of new model launches from the non-national carmakers, the national carmakers will continue to dominate the local mass market space. Given the weak economic outlook, the downtrading trend is gaining pace in the domestic automotive market, where sales of cheaper national brands with refreshed line-ups have continuously outpaced the pricier Japanese cars.

**OVERALL INDUSTRY OUTLOOK : Marginal Growth****CREDIT RISK EVALUATION & RECOMMENDATION**

Incorporated in 1997, the Subject is a Private Limited company, focusing on trading of motor vehicles. Having been in the industry for over a decade, the Subject has achieved a certain market share and has built up a satisfactory reputation in the market. It should have received supports from its regular customers. The Subject is a large entity with strong capital position of MYR 13,000,000. We are confident with the Subject's business and its future growth prospect. Having a strong shareholders' backing, the Subject has the advantage to compete with its rivals and it is expected to enjoy timely financial assistance should the needs arise.

Over the years, the Subject should have build up its clientele base and received supports from its regular customers. Investigation revealed that the Subject's interest lies mostly in the local market. Overall, we regard that the Subject's management capability is average. This indicates that the Subject has greater potential to improve its business performance and raising income for the Subject.

Despite the lower turnover, the Subject's pre-tax profit have increased compared to the previous year. The higher profit could be due to better control of its operating costs and efficiency in utilising its resources. Return on shareholders' funds of the Subject was at a favourable range which indicated that the management was efficient in utilising its funds to generate income. Due to its weak liquidity position, the Subject may face working capital deficiency in meeting its short term financial obligations if no fresh capital are injected into the Subject. Being a lowly geared company, the Subject is exposed to low financial risk as it is mainly dependent on its internal funds to finance its business needs. Given a positive net worth standing at MYR 12,789,629, the Subject should be able to maintain its business in the near terms.

The Subject's supplier are from both the local and overseas countries. This will eliminates the risk of dependency on deliveries from a number of key suppliers and insufficient quantities of its raw materials. Overall the Subject has a good control over its resources.

The Subject's payment habit is average. With its adequate working capital, the Subject should be able to pay its short term debts.

The industry has reached its maturity stage and only enjoying a marginal growth. The steady growth of the country's economy will further enhance the industry activities. Thus, the Subject's future performance is very much depend on its marketing strategies in order to retain its position in the market.

Based on the above condition, we recommend credit be granted to the Subject normally.

CREDIT RATING DEFINITION

The credit rating scale is an ordinal measure of risk where successive move down the scale represents an exponential increase in credit risk. The rating reflects the credit risk and confidence level of Subject and serves as a guide in setting the amount of credit to be extended. It is calculated from a composite weighted scores obtained from each of the macro and micro analyses as epitomized by the 6 Cs.

<ul style="list-style-type: none"> <li>● <b>CHARACTER (15%)</b></li> </ul> <p>It refers to the study of Subject years of establishment, legal status and its shareholders or owners.</p>	<ul style="list-style-type: none"> <li>● <b>CREDIBILITY (20%)</b></li> </ul> <p>It refers to the Subject's credibility in honoring its obligations through an evaluation of its payment records and credit history.</p>

DEFAULT RATING DEFINITION

Default rate defined as the probability of the Subject with given credit rating default within the next 12 months period. The Subject is deemed default upon the first occurrence of any of the events such as a missed or delayed disbursement of interest and/or principal, a distressed exchange with creditor, company winding up or company dissolution. Default rate is generated from the statistic stochastic model, namely Transition Probability Matrix (TPM) Model. TPM Model consist of a rating transition probability matrix built based on discrete-time Markov chain using the Cohort approach along with time homogeneity and non-informative transition assumptions.

CREDIT LIMIT DEFINITION

The credit limit is determined with consideration of Subject's financial health, payment record, industry outlook, credit history and adjusted accordingly with reference to the credit rating identified. The proposed credit limit of evaluated Subject is the recommended outstanding total amount of credit to the Subject at any time.
